

Influenza continues to be detected at low levels in King County. No influenza-related deaths or facility-based outbreaks have been reported through the week ending 11/22/2014. The proportion of emergency department visits attributable to ILI remains at baseline levels, with slightly elevated levels among children under age five; levels are comparable to those seen in previous years. During the week ending 11/22/2014, the University of Washington Virology laboratory saw an increased number of specimens positive for parainfluenza, as well as small numbers of influenza A and influenza B isolates.
